

Practical 1

Instructions to download EMBOSS

For Windows users:

1. Go to <http://emboss.sourceforge.net/download/>
2. Copy the ftp link under platform dependent notes (<ftp://emboss.open-bio.org/pub/EMBOSS/windows/>).

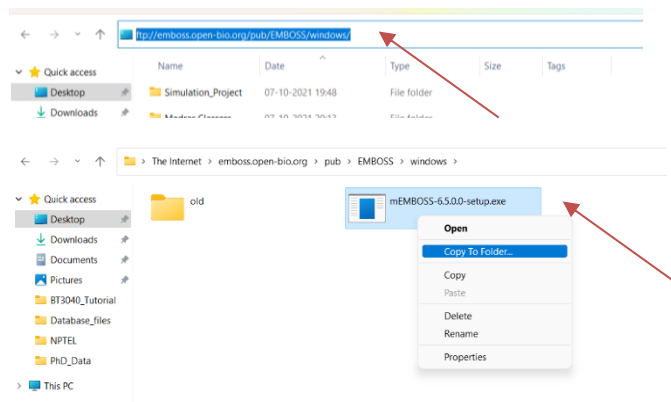

Platform-dependent notes

- MacOSX porting notes
- EMBOSS is supported under SGI systems.
- GNU-Darwin notes <http://gnu-darwin.sourceforge.net/gdc/emboss.txt>
- Cygwin on Windows notes
- Windows support moved to the EMBOSS team with version 4.0.0. A native windows version is now included with the current release in the <ftp://emboss.open-bio.org/pub/EMBOSS/windows/> directory. More details are in the README.win file

RPM Package Manager files

The RPM Package Manager (RPM) is command-line driven package management system for installing, uninstalling, verifying, querying and updating software packages. Each software package consists of an

3. Open your My computer/This PC/File Manager.
4. Replace the search with the ftp link copied before.

5. Click enter and you see the setup or exe file. Right click on the exe and select copy to folder to save it.
6. Then install the exe file
7. You will also need to install Javasetup.exe ([Link](#))

For Linux users: use the command: `sudo apt-get install jemboss`

For Mac users: use the online tool given below:

Q2. Use the following link (https://www.bioinformatics.org/sms/rev_comp.html)

Q4. Use the following link (https://www.ebi.ac.uk/jdispatcher/st/emboss_transeq)
